

rxTools

-with Pasta-

Quick start Guide

1

Run *tools/cdn_firm.py*.

On Windows, you need to install **Python** first.

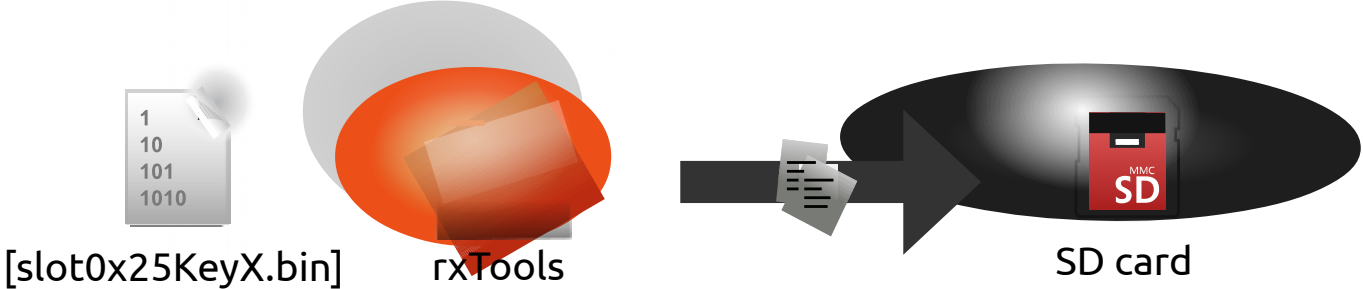

cdn_firm.py

On GNU/Linux and OS X, open a Terminal, type, without quotes, "python ", then drag&drop the file there and press Enter.

NOTE: You need to unblock updates in order to download the firmware from the CDN.

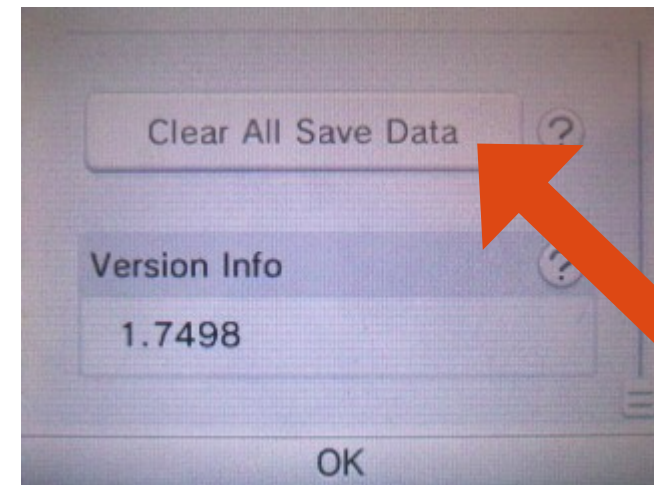

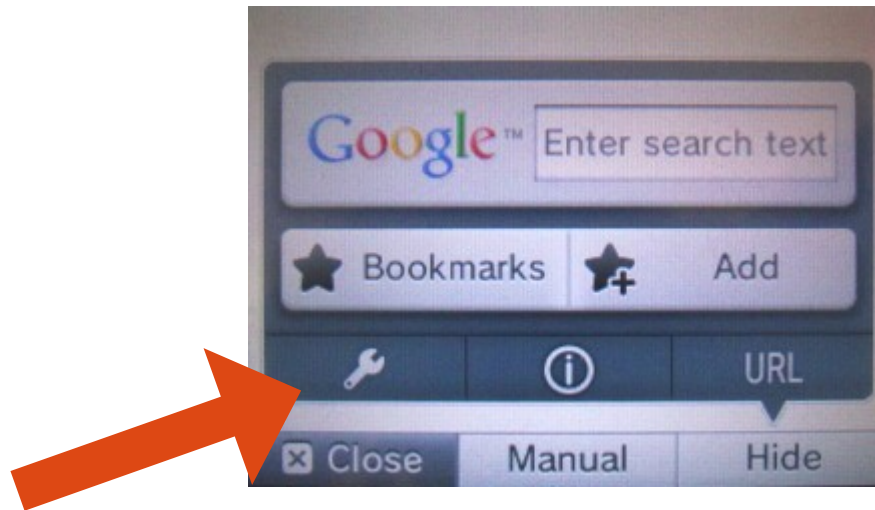

2

Copy *slot0x25KeyX.bin* (optional) and the *rxTools* folder (be sure it contain the firm folder generated in the first step) to the *SD card*.

NOTE: If your firmware version is 8.0 or higher, you don't need slot0x25KeyX.bin.

3 Open the browser settings and select *Clear All Save Data*.

4

Turn off Wi-Fi and go to the URL:

<https://dukesrg.github.io/?rxTools/sys/code.bin>

Close the browser, turn on Wi-Fi and open the browser again.

The next time you open the browser, it will load rxTools automatically.
